Overview

The NLG 101384 Tablet Case is perfect for tethering iPads, tablets and touch screen devices when working at height. Dropped objects can cause serious injury to those around you or damage to equipment and vehicles. As such, it is vitally important to make sure your equipment is safely secured. This is especially true for communication devices, one of the most commonly dropped tools.

The NLG Tablet Case helps protect and secure your tablet when conducting inspections and similar tasks at height. It is made from industrial grade neoprene material with a clear, 'soft touch' screen cover, which allows full touch screen functionality. The case is easy to use, one size fits all with multiple camera apertures, so it compatible with most modern tablets on the market. It also comes with a strap, allowing it to be worn over the shoulder as well as tethered to a safety harness or belt. Maximum load of 3kg/6.6lbs.
